

The company DepurFiltech, s.l., has achieved last March and in the deadline granted by law, the migration of the previous standard OHSAS 18001, to the current ISO 45001. This international standard specifies the requirements for an occupational HEALTH and SAFETY management system. Through it, it allows organisations to have effective protocols to carry out SAFE and HEALTHY work, prevent accidents at work and health problems, as well as having an occupational health and safety management system, improving it proactively.

The goals we set ourselves with this standard are;

- Continuous improvement of health and safety related services.
- To comply with legal and other requirements.
- To achieve the proposed health and safety objectives.
- 

For us, this rule is fundamental due to the context in which we operate when it comes to the execution of the maintenance work of changing bags, cages, etc., that we carry out for our clients, managing the risk profiles at all times through a systematic process that maintains the health of all workers, for optimum daily performance.

Depurfiltech has integrated the 45001-2018 standard in a simple way, as it is aligned with the other two standards we have implemented in the company (9001-2015 and 14001-2015), which give us a reputation and a firm commitment to our customers and employees.
